Art Unit: 2181

DETAILED ACTION

1. Claims 1-46 are pending.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1-46 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-31 of copending Application No. 08/998,583. Although the conflicting claims are not identical, they are not patentably distinct from each other because they recite the same limitations with minor variations in language. For example, both claims 25-32 of the instant application and claims 1-2 and 8-12 of copending application 08/998,583 recite a program storage device with instructions which, when executed by a computer, map a plurality of virtual addresses to respective physical addresses upon detecting a configuration event, wherein each virtual address and its respective physical address is mapped into at least one of an array, a doubly linked list, a tee, a table and a file, wherein the mapping includes querying each of the plurality of bus devices, identifying each

Art Unit: 2181

queried device, ascertaining the virtual address and the physical address for each identified device, constructing a map of the virtual address to physical address, and storing map, wherein the map is bi-directional and the virtual address is a GUID. The remaining claims in the instant application are similarly not patentably distinct from the remaining claims in copending application 08/998,583.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.
- 5. Claims 1-9, 13-21, 25-28, 31-37, and 40-44 are rejected under 35 U.S.C. 102(e) as being anticipated by Lawande et al., 6,219,697 (hereinafter Lawande).

As to claims 1-9, 13-21, 25-28, 31-37, and 40-44, Lawande discloses a bus system comprising a dynamically configurable bus (i.e., IEEE 1394 serial bus), a first bus device on the bus at a first virtual address and a first physical address, a second bus device on the bus at a second virtual address and a second physical address, and a map of the first and second virtual addresses to the first and second physical addresses, respectively, encoded on a program storage medium (i.e., look-up table 198 in RAM 196), the map being accessible over the bus, wherein at

Page 3

Art Unit: 2181

least one of the first and second virtual addresses is a guaranteed unique identifier (i.e., unchangeable network identifier) wherein the map resides on at least one of the first and second bus devices, wherein at least one of the first and second bus devices is a bus manager (i.e., network manager 190), wherein the bus manager comprises one of a workstation and a personal computer, wherein the map is stored on the bus manager, wherein the bus system implements a network, wherein at least one of the first and second bus devices is selected from the group comprising a printer, a plotter, a workstation, a personal computer, a video camera, and a magnetic tape drive, wherein the map is encoded as a structure from the group of an array, a doubly linked list, a tree, a table, and a file, that the bus is dynamically configurable, and that the mapping is performed only for the bus devices experiencing a configuration event (note abstract, Figures 6A-6C and 8, column 3, line 58 – column 4, line 17, column 4, lines 60-65, column 11, line 37 – column 16, line 40).

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claims 10-12, 22-24, 29, 30, 38, 39, 45, and 46 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lawande et al., 6,219,697 (hereinafter Lawande).
- a. As to claims 10, 22, 30, 38, and 45, Lawande fails to disclose that the map is bidirectional.

Page 4

Art Unit: 2181

Examiner takes Official Notice that bi-directional maps are well known in the art of address/id mapping.

It would have been obvious to one of ordinary skill in the art at the time of the invention to employ the use of a bi-directional map in the system of Lawande so as to provide more flexibility in accessing the map by allowing the data in the map to be indexed with more than one index.

b. As to claims 11, 12, 23, 24, 29, 39, and 46, Lawande fails to disclose that the bus includes a first dynamically configurable bus and a second dynamically configurable bus coupled by a bridge, but does disclose the mapping of virtual addresses to physical addresses is performed only for bus devices experiencing a configuration event.

Examiner takes Official Notice that computer/network systems with a hierarchy of IEEE 1394 buses coupled by bridges are well known in the art of computer/network systems.

It would have been obvious to one of ordinary skill in the art at the time of the invention to have multiple IEEE 1394 buses coupled by a bridge in the system of Lawande so as to allow for the connection of additional IEEE 1394 devices on additional buses when the limits set by the IEEE 1394 standard have been reached.

Response to Arguments

8. With respect to the double patenting rejection, the Office Action does not identify any differences between the claims in the present application and those in the copending application.

The only difference between the claims in the present application and those in the

Art Unit: 2181

copending application is in the format of the claims, not in the content. Both sets of claims contain the same basic limitations but differ only in the way the limitations are combined. The overall claim limitations are, however, the same.

9. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure as the art discloses translating from virtual to physical network addresses/ids for network devices.
